

Test Bank for Aging and the Life Course An Introduction to Social Gerontology 7th Edition by Jill Quadagno

Chapter 02 Life Course Transitions

Multiple Choice Questions

1. (p. 28) Transitions are:

- A. social changes that occur as one cohort replaces the other.
- B. the impact of historical events on the entire society.
- C. role changes individuals make as they leave school, take a job, marry, have children, or retire.
- D. ways of using age as a social category to group people by status.

5. (p. 29) One of the major methodological issues in research on the life course is:
- A. collecting data to test various hypotheses.
 - B. selecting the appropriate sample size.
 - C. distinguishing among age, period, and cohort effects.
 - D. distinguishing between abstract and concrete concepts for the study.

8. (p. 31) The best research design to distinguish among age, period, and cohort effects is:
- A. cross-sectional.
 - B. longitudinal.
 - C. secondary data.
 - D. participant observation.

Accessibility: Keyboard Navigation

9. (p. 30) The finding that older people are more politically conservative than younger people is an example of:
- A. aging effect.
 - B. cohort effect.
 - C. period effect.
 - D. subculture effect.

Accessibility: Keyboard Navigation

10. (p. 30) According to research, support for gay marriage was lowest among:
- A. the Millennials.
 - B. the Silent Generation.
 - C. the Echo Boomers.
 - D. the Swing Generation.

11. (p. 31) The longitudinal research design that focuses on the role that social support and personal relationships play in healthy aging is _____.
- A. the Health and Retirement Survey
 - B. the Baltimore Longitudinal Study of Aging
 - C. the National Social Life, Health and Aging Project
 - D. the Asset and Health Dynamics among the oldest-old

Accessibility: Keyboard Navigation

12. (p. 32) Which of the following is not a technique used in qualitative research?
- A. interviewing individuals using a survey instrument
 - B. participant observation
 - C. open-ended interviews
 - D. observing people in a natural setting

Accessibility: Keyboard Navigation

13. (p. 32) All of the following are characteristics of longitudinal research designs except:
- A. they follow a particular group of people over time.
 - B. they provide data about differences between age cohorts.
 - C. they are costly.
 - D. they are factual because all of the same subjects remain in the study.

14. (p. 34) The term "age timetables" refers to:
- A. the number of years spent in each phase of the life cycle.
 - B. appropriate ages for making various life course transitions.
 - C. the expected timing or deadline for life events.
 - D. timetables that order life events.

15. (p. 32) Which of the following is NOT an example of life course transition in the family sphere?
- A. parenthood
 - B. grandparenthood
 - C. entering full-time employment
 - D. marriage

16. (p. 32) An advantage of longitudinal research studies is that they:

- A. follow different groups of people at different points in time.
- B. do not distinguish age effects from cohort effects.
- C. provide data about differences between age cohorts.
- D. do not require any investment as they monitor subjects at only one point in time.

Accessibility: Keyboard Navigation

17. (p. 32) A disadvantage of longitudinal research studies is that they:

- A. fail to include children and teens in their research.
- B. fail to distinguish age effects from cohort effects.
- C. have a tendency to be biased as some people drop out over a period of time.
- D. can only include people of different age cohorts at a single point in time.

19. (p. 34) One of the reasons for the "crowded nest" phenomenon is:

- A. low wage for young workers.
- B. young adults these days are much less independent from their parents than in the past.
- C. unavailability of other housing alternatives.
- D. parents prefer to have their adult children living with them.

Accessibility: Keyboard Navigation

20. (p. 35) The _____ refers to middle-aged people who have both dependent children and aging parents.

- A. crowded nest
- B. social clock
- C. swing generation
- D. sandwich generation

23. (p. 40) One theory which seeks to explain why inequality increases with age is the:

- A. age stratification theory.
- B. age inequality theory.
- C. theory of cumulative disadvantage.
- D. demographic transition theory.

Accessibility: Keyboard Navigation

24. (p. 40) Which of the following statements is true of the theory of cumulative disadvantage?
- A. It states that the past history of an individual has little relationship with the future behaviors of the individual.
 - B. It indicates that inequality among people 65 or older is the lowest of all age groups.
 - C. It highlights the influences of earlier life experiences on the quality of life in old age.
 - D. It proposes that the advantage of one group over another group remains constant at any period of time.

25. (p. 40) The government has the greatest impact on:
- A. adolescence and young adulthood.
 - B. children and older adults.
 - C. adolescence and old age.
 - D. children and adolescence.

Accessibility: Keyboard Navigation

26. (p. 41) Why do most people think of "old age" as starting at 65?
- A. That's the age that most people retire these days.
 - B. That's traditionally the age at which most health problems begin.
 - C. That's the average age at which people become grandparents.
 - D. Prior to the year 2000, that was the age at which retired workers could begin receiving Social Security benefits.

True / False Questions

28. (p. 28) The life course of individuals is shaped entirely by the individual.

FALSE

Accessibility: Keyboard Navigation

29. (p. 28) An example of a countertransition is achieving a bachelor's degree at age 18.

FALSE

Accessibility: Keyboard Navigation

30. (p. 29) Age grades use age as a social category to group people by religious and sexual orientation.

FALSE

Accessibility: Keyboard Navigation

31. (p. 29) The basic assumption in measuring age effects is that changes due to aging reflect biological and physiological developments that are independent of specific times, places, or events.

TRUE

Accessibility: Keyboard Navigation

32. (p. 29) The best example of an aging effect is the civil rights movement of the 1960s.

FALSE

Accessibility: Keyboard Navigation

33. (p. 30) A cross-sectional research design consists of asking people in several age groups the same information.

TRUE

Accessibility: Keyboard Navigation

34. (p. 31) A major advantage of the longitudinal research design is that it compares subjects from different cohorts.

FALSE

Accessibility: Keyboard Navigation

35. (p. 31) The Health and Retirement Survey is an example of a cross-sectional research study reported to the government panels making policy decisions about families.

FALSE

Accessibility: Keyboard Navigation

36. (p. 32) A major disadvantage of the longitudinal research design is the cost.

TRUE

Accessibility: Keyboard Navigation

37. (p. 34) One distinctive change in the duration of a life course phase is the extension of adolescence.

TRUE

Accessibility: Keyboard Navigation

38. (p. 35) The period of old age is also another change in the duration of the life course. It may last as long as 45 to 55 years.

FALSE

Accessibility: Keyboard Navigation

39. (p. 35) If there are disorders in the sequencing of life events, there may be negative consequences for later life transitions.

TRUE

Accessibility: Keyboard Navigation

40. (p. 37) A number of studies have found that children who are overweight are much more likely than slim children to be obese as adults.

TRUE

Accessibility: Keyboard Navigation

41. (p. 39) Until recently, middle age was distinct from the rest of adult life.

FALSE

Accessibility: Keyboard Navigation

42. (p. 39) By the 1970s, the average couple had their first child by their late 30s and had a total of four children spaced two years apart.

FALSE

Accessibility: Keyboard Navigation

43. (p. 40) People who start life at an advantage are likely to experience increasing benefits as they age.

TRUE

Accessibility: Keyboard Navigation

44. (p. 41) The government has the greatest impact on two phases of the life course: adolescence and old age.

TRUE

Accessibility: Keyboard Navigation

Essay Questions

45. What are the major historical events that have affected your age cohort?

Answers will vary.

46. What is the ideal family size and how far apart should children be spaced?

Answers will vary.
